EXPAND YOUR VISION

# SYMMETRY Video Management System

## Expand Your Vision

**Symmetry Video Management System (VMS) is the next generation video surveillance solution. The open platform makes it suitable for small and large applications, whilst supporting market leading NVRs, DVRs, IP and analog cameras.**

## You are in Control

Do you need video of every person entering your building? Do you want cameras to record only when an alarm is triggered? Configure your security management system to record what's important to you and automatically record what you pre-define.

Once your information is recorded, you choose where and how to disseminate the captured video. Does the security manager want an email every time a specified alarm is activated? Should the lights illuminate or a siren sound when an alarm is triggered? Notify security staff via the most effective way to keep your premises secure.

**EXPAND THE SCOPE OF YOUR SECURITY MANAGEMENT SYSTEM INTO A TRULY SEAMLESS SOLUTION FOR ACCESS CONTROL, INTRUSION, IDENTITY MANAGEMENT, BIOMETRICS AND VIDEO.**

For even more control, specify your video management system to flash the cardholder's image on the monitor when a card is swiped. After the guard confirms the cardholder and the information on the monitor are in sync, the guard can manually grant access. This provides ultimate control in high security areas where close monitoring is necessary.

Security staff can view camera activity by preference. Select from 25 predefined matrix displays showing up to 72 cameras on a single PC. Does each guard have their own camera view preference? No problem. Save the views and recall as required via operator permissions.

Control a camera's PTZ operation, zoom capabilities, and focus from the software. Security operators can view all declared cameras on DVRs, video servers or IP cameras, as well as see any Internet declared webcams or web pages.

Symmetry NVR (Network Video Recorder) software controls the storage of video from ENVS and IP cameras on network servers and PCs.

## Powerful Symmetry ENVS<sup>®</sup> Secures Your Facility

The Symmetry ENVS tightly integrates with Symmetry access control panels to provide event based recording, reducing storage requirements and allowing the system components to manage LAN bandwidth making your network more efficient.

The Symmetry ENVS provides a flexible video management hardware platform for organisations moving towards digital video. Professional video server options enable you to integrate your existing analogue CCTV system into an IP-based solution. You can acquire all the benefits that digital technology offers without reinvesting in a new system. Now you can move towards digital video while operating under the constraints of legacy camera installations, network bandwidth and storage limitations.

**EXPAND YOUR VISION**

# SYMMETRY Video Management System

## Symmetry Video Management System Benefits at a Glance

- Incorporate into a complete Symmetry Security Management System.
- Maximise employee productivity and view cameras by priority or preference.
- IP based solution that works with old and new technology including NVRs, DVRs, IP and analogue cameras on the same system.
- Save time and manpower when performing multiple camera investigations by playing back multiple clips simultaneously.
- Simplify viewing and save time when you integrate video into the same interactive maps and alarm screens as access control and intrusion devices.

**SYMMETRY VIDEO PROVIDES A FLEXIBLE VIDEO MANAGEMENT PLATFORM FOR ORGANISATIONS MOVING TOWARDS DIGITAL VIDEO.**

## Forward Moving Technology

Symmetry is one of the security industry's leading brands of card and biometric access control systems. The system provides a complete integrated security solution.
